As long as you wait for the download to complete, please consider contributing to supporting the development of caliber. Previous caliber launches are available here. Note If you're using Windows 7 or Vista please use caliber 3.48, which works with all Windows Machines 7/Vista, from here. Simply uninstall caliber and install 3.48, doing so will not affect your books/settings. 10-18-2019, 03:56 PM #1 Member Sites: 17 Karma: 10 Join date: March 2012 Device: Android Asus Transformer Caliber and Windows 7 - Tips if please today when upgrading to Caliber v 4.2.0 caliber v 4.1 running under Windows 7 64-bit I actually saw and read the note on the downloads page If you are using Windows 7 or Vista please, use caliber 3.48, which works with all Windows 7/Vista machines, from here. Simply uninstall caliber and install 3.48, doing so will not affect your books / configuration I have not had any consequence problems since the update to version 4.x; however a friend I just introduced to Caliber has some flakiness running under Windows 7 32-bit my question... does the warning to use Caliber v 3.48 apply to Windows 7 or only in Windows 7 32-bit (i.e. I just got lucky in X64 and Caliber 4) ? 10-18-2019, 04:15 PM #2 Well trained by Cats Posts: 25,847 Karma: 39099821 Join date: August 2009 Location: The Central Coast of California Device: K4NT (Fixed, New Bat.), Galaxy Tab A, Kobo Aura2 Open a book to the editor. You can see the text in the Preview pane. You have a system that works. For some, that glass is blank (white). The reason for the note. 10-18-2019, 04:23 PM #3 Resident Curmudgeon Posts: 60,667 Karma: 64523003 Join date: Nov 2006 Location: Roslindale, Massachusetts Device: Kobo Aura H2O, PRS-650, PRS-T1, Nook STR, iPad 4, iPhone SE 2020, PW3 Quote: Originally posted by stualden Just to be clear (I'm curious) - the problem is shown in viewer or metadata editor (or both)? Fortunately both are fine for me here (Windows 7 64-bit). I just saw this note about 3.48 this morning. 10-19-2019, 08:28 AM #9 Resident Curmudgeon Posts: 60,667 Karma: 64523003 Join date: Nov 2006 Location: Roslindale, Massachusetts Device: Kobo Aura H2O, PRS-650, PRS-T1, Nook STR, iPad 4, iPhone SE 2020, PW3 Quote: Originally posted by stualden Just to be clear (I'm curious) - the problem is shown in the viewer or the metadata editor (or both)? From what I understand, the problem with Caliber 4.x and Windows 7 only affects some systems. 10-19-2019, 10:04 AM #10 Well trained by Cats Posts: 25,847 Karma: 39099821 Join date: August 2009 Location: California Central Coast Device: K4NT (Fixed, New Bat.), Galaxy Tab A, Kobo Aura2 Quote: Originally Published by stualden Just to be clear (I'm curious) - is the problem shown in the viewer or metadata editor (or both)? If my Windows 7 64-bit system is one that still works with Caliber 4.2, I should 4.2 or you are updating a risk. If I leave the desktop at 4.2 you will be able to communicate with a higher version of Caliber on my Windows 10 laptop? 01-20-2020, 09:21 PM #12 Null Operator Messages: 16769 Karma: 19705250 Join date: March 2012 Location: Sydney Australia no Why not upgrade the Windows 7 system to Windows 10 – it can be done for free. But regardless of that, there's no reason not to keep the same caliber version on your Win7 desktop and your Win10 laptop. If/when Kovid blocks new installations/updates in Win7 it will probably match a major release. Kovid will notify us, if this is not compatible with earlier versions. The PY thing is for the code, they use the plugins. If you stick with W7, you just need to pay attention to NOT loading a PI that has become incompatible (the CALiber PI update notifier checks installed, so you shouldn't see this... But... Keep a backup of the entire configuration folder, just in case you need to set older PI back.) 01-20-2020, 09:31 PM #14 Caliber Creator Messages: 33,299 Karma: 169999999 Join date: October 2006 Location: Mumbai, Mumbai India Device: Several you can keep updating if it works for you, and yes different caliber versions will interoperate with each other in general, although this obviously isn't recommended, since very occasionally there may be incompatible changes backwards, for example the name or location of some settings may change, or the db may grow new tables that older versions of caliber 01-22-2020, 06:10 PM #15 Zealot Messages: 128 Karma: 129368 Join date: February 2017 Device: Nook Glowlight+, Nook Tab. , Nook Simple Touch, iPad Air, iPhone 6Se Thanks Kovid. I have the same version of Caliber on my laptop and desktop but my question about different versions working together was in case I updated the laptop and but

couldn't update the desktop. The main reason I haven't upgraded to Windows 10 is the fear of something going wrong. Wrong.
